CityCharge CCMS Unit

CCMS + EV Charger

Efficient, scalable, revenue-generating, and smart city-ready solution for morden urban infrastructure.

Key Benefits 1 - Optimum Utilization of Infrastructure

Leverages existing CCMS infrastructure to add EV charging capability without additional cabling or control systems.

Comman Infrastructure Costs

- Grid connection / Power Upgrades / Transformers
- Cabling, Trenching
- Site Preparation / Civil Works
- Land or Leasing / Real Estate Cost
- Permits / Site Lighting / Safety Equipment
- Operational Systems, Networking etc.
- AMC

For an CCMS setup, around 40–60% of the total cost typically goes into infrastructure, installation, and civil works. The same applies to a AC EV charger setup. By installing both together, you can significantly reduce the overall setup cost.

Key Benefits 2 - Revenue Generation Asset

Converts CCMS infrastructure into a revenue-generating platform through paid EV charging and socket usage.

Key Benefits 3 - Smart City Ready

Ideal for smart city projects integrating smart lighting and smart mobility infrastructure under one centralized platform.

Key Benefits 4 - Faster Rollout for Smart City Projects

Combines CCMS and EV charging in one compact unit, making deployment simple & enabaling faster rollout for smart city projects.

Key Features

User-Friendly Interface

Offers simple plug-and-charge operation with RFID or mobile app-based access, making it convenient for end-users.

Durable Design

Weather-resistant construction with safety features like overload and short-circuit protection, ideal for outdoor installations.

Flexible Deployment

Suitable for public spaces, parking areas, residential complexes, campuses, and commercial sites, adapting to various infrastructure requirements.

Dual Utility Sockets

Two 3-pin & IEC sockets supports light electrical loads such as EV - two wheelers, e-rickshaws, or EV car providing added flexibility.

Load Management

Intelligent power distribution between EV charger and CCMS prevents overload, maintains stable performance, and extends equipment life.

EV Charger Unitilization	6 hrs/Day	3 hrs/Day
Energy Consumed (kW)	40	20
Net Income Per Day (Rs.)	160	80
Net Income/Month (Rs.)	4800	2400
Net Income/Year (Rs.)	57600	28800
Break-even Period	**Approx 2.5 Months**	**Approx 4.5 Months**

Additional Cost for UrbanCharge CCMS V/S Traditional CCMS - Rs. 10,000/-

Input Energy Cost - Rs. 10/Unit | CMS Cost - Rs. 1/Unit | Consumer Tarrif - Rs. 15/Unit

UrbanLink is a secure, flexible, and user-friendly Smart City Management Platform (SCMP) that can be developed to manage streetlights and other smart city assets based on custom requirements. It has the potential to monitor, manage, and control a range of smart street assets including EV charging stations, smart poles, cameras, access points, billboards, and various IoT sensors.

- Smart Streetlights
- Billboards
- Smart Poles
- Parking Sensors
- Gateways
- EV Charging Stations
- Cameras
- Environmental Sensors
