

An Indigenously designed industrial gateway helped Ciaztech to reduce cost and enhance performance

SLS built up Industrial solution gateway with OTS (off the shelf) SOC (System-on-chip) and software support for legacy and non-legacy interfaces

Industry

Industrial automation

Requirement

An industrial Gateway with high level of accuracy and reduced cost

Solution

Hardware design for industrial gateway and relevant software support

Features

- Designed in India
- Off the Shelf and System-on-Chip (SOC) based solution
- Various protocol supports like GSM to enable Internet of Things (IoT) applications
- Design with single script to validate all interfaces
- Possibility for reuse with any (OTS) firmware for given SOC

Outcome

- Cost reduction
- Enhanced performance and scalability
- Enable client to capture more market share

Summary

Ciaztech LLP was in search of an Industrial Gateway Hardware which would allow them to securely access the system/machine remotely and should help to reduce cost. System Level Solution (SLS) designed a “Industrial gateway” hardware which is the key-part of Industrial system integration. This in turn, enabled Ciaztech to reuse any OTS firmware for given SOC while reducing cost and enhancing performance.

Client Profile

Ciaztech LLP is a system integrator for automotive industry. With 20 years of experience in industrial automation for different the automotive manufacturing industry, Ciaztech LLP is a respectable name in the industry. As a system integrator, Ciaztech builds up industrial solution gateway with OTS, SOC and software support for legacy and non-legacy devices.

Business Challenge

As a system integrator, Ciaztech was in search of an industrial gateway solution which would help them to capture the market for industrial automation. Thus, they decided to use a hardware design solution for industrial gateway for all legacy and non-legacy devices. The solution was expected to work smoothly with highest accuracy while reducing cost and enhancing scalability. Moreover, they preferred to use indigenously designed solutions.

Ciaztech selected SLS as their solution partner. The deciding factors in favour of SLS were:

- Good hardware skill
- Excellent technical support
- Vast experience of SLS supporting Linux
- BSP inclusive of in-house hardware design capabilities.
- Adherence to 'Design in India'

The Solution

SLS designed the "Industrial Gateway" hardware based on requirement given by Ciaztech LLP. The proposed solution met the following criteria.

- Designed in India
- OTS and SOC based solution
- Various protocol supports like GSM to enable IoT applications

The project scopes also included complete support for developing industrial gateway and other solutions as given below:

- Yocto based operating system support
- Yocto SDK support for easy and fast application development.
- Middleware-framework (KURA) support.
- Yalgaar cloud support.
- Freeboard.io demo web-page support

Outcome

With the help of the newly designed Industrial Gateway, the client observed Moreover, SLS also fulfilled all the expectations of Advanced Microdevices. Now they require to increase the capacity as per load and install the same system in other sites of the company.

- Cost reduction
- Enhanced performance and scalability
- Possibility of reused of any off the shelf firmware for given SOC
- Single script to validate all interfaces.

SLS solution fulfilled all the expectation of Ciaztech LLP. This in turn helped the client to reach their aim to capture the industrial automation market. Ciaztech commented as they are more than satisfied with SLS hardware/technical support.

Now the client has planned to redesign another Gateway Hardware for another SOC with SLS as a solution partner.

SLS solution fulfilled all the expectation of Ciaztech LLP. This in turn helped the client to reach their aim to capture the industrial automation market.
