

# Street Light Management System

Lighting Management System (LMS) is a cost-effective, cloud-based platform that gives municipalities complete control over their streetlight infrastructure. With real-time monitoring, insightful dashboards, and advanced analytics, it helps optimize energy consumption and streamline operations.

The software also enables seamless inventory management, task allocation, and maintenance planning. As a vendor-neutral solution, it supports all streetlight brands and is ideal for both upgrades and new deployments. Built with top-tier security, ViaLights LMS ensures the safety and confidentiality of your data and automatic detection of failures with integrated work order management & module.

## Features

- Device Live location on Map
- Group and individual controlling
- Light Planner & Scheduling
- Ticket management & escalation matrix
- Alerts & Notifications
- Asset Tracking
- Interactive Dashboard
- Comprehensive Reporting and Analytics

## Why Us?

**Manage All Types of Street Lighting**  
Smart/NEMA-ready, non-NEMA

**Vendor Neutral System**  
Supports all major brand

**Optimize energy consumption**  
Scheduled dimming & controllability

**SaaS & one-time license models**

**Reduce maintenance cost**  
Automated detection of failures & abnormalities

**Troubleshoot Issues Quickly**  
Automatic detection of failures with integrated work order management module

**Cloud & on-premise deployment**

## Benefits

1. Map-based direct interaction
2. Ticketing and maintenance automation
3. In-depth analytics & customizable reports
4. Top-notch Security
5. Advanced User & Access Management
6. Alerts & Notifications
7. Cabinet (group control)
8. Easy integration with command centre
